

EasySave – User manual

Main menu

In the main menu, you can choose different features numbered from 1 to 7. Just enter the number of the feature and press enter to access the feature.

Creating a job

The first one allows you to create a new backup job. In this feature, you will have to enter :

- The name of the backup job
- The source path (folder or file)
- The destination path
- The type of the backup (full or differential)

Important: You can create a maximum of five backup jobs. Otherwise, you must delete one before creating a new task.

List saved jobs

The second feature allows you to list all saved backup jobs and display their information.

Delete a job

The third feature allows you to delete a job. The jobs are listed and then you just have to insert the number of the job you want to delete, and press enter.

Launch a backup

The fourth one allows to launch a backup job or all of them. To launch a backup job you just need to insert the number of the job or just press enter to launch all backup [jobs](#).

Show logs

The fifth one shows the log files currently saved on the computer.

Change language

The sixth allows you to change the interface language. You can choose between English and French.
