

Release Note 1.0:

We are pleased to announce the release of the first version of our backup software. This version includes the following features:

Creation of up to 5 backup jobs, defined by name, source directory, target directory and type (full or differential).

Multilingual support for English and French speaking users.

Ability to run a selected backup job or all jobs sequentially.

Ability to backup local, external or network directories.

Real-time recording of backup action history in a daily log file with information such as time stamp, job name, source and target file addresses, file size and transfer time.

Real-time recording of backup job progress in a single file with information such as job name, timestamp, job status, total number of eligible files, progress, and addresses of source and target files being backed up.

The log and status files will be in JSON format.

We hope this version meets your expectations and we are committed to continue improving our software to provide you with the best experience possible.

Note: Following a satisfaction of our software, we will develop a version 2.0 with a WPF graphical interface (based on the MVVM architecture).
