

Easy Save

Gui User Manual

Welcome to the graphical interface of Easy Save. Here will be explained each tab.

JOB

The first tab is about jobs. Jobs are defined by an ID, a name, the source, destination path, and the state of said job. You will have on the top side the list of different created jobs and on the top right a button to create a job. Then you can select any job you want and view detailed information about it. You'll find the name, source, destination path, save type, date of creation and modification if there was any. You have also the option to activate the job manually or delete it in between the list of jobs and the details.

EXECUTIONS

The next tab, the executions is dedicated to executing one or more jobs. Jobs are shown in a tab and defined by an ID, name, source, destination path and a type. Once you select one or more jobs you can click on the « Exec selected jobs » or « Exec all jobs » which will execute all jobs even non-selected ones. You can also choose to encrypt your file and put the key you want and choose the extension files you want to save.

LOGS

The log tab is used to display the different logs files. You will have two (2) tabs inside the logs, the list of logs files available in the « History of executions ». Then you can select one or more log files thus bringing new options as such as reading the selected files, previewing them either in JSON or XML format.

LANGUAGES

Here you can change the language app.

HELP

Help page give access to the FAQ and documentation about Easy Save.

ABOUT US

This page is dedicated to the team that worked on Easy Save.

CryptoSoft

Cryptosoft is the encryption app used by Easy Save, this app will be used when the user select the encrypt option in the execution tab.
